

Stationary Tablet Discharge Systems

PROFILE

Every solid dosage manufacturing plant requires safe handling of both uncoated and coated tablets without breakage. Servolift has produced many hundreds of customized systems to solve these applications.

We offer our clients total security in knowing that we have the experience to deliver a properly working and cGMP system, as we have produced hundreds of successful installations since 1976.

We can handle any ibc/bin, drum or fibc and have virtually no limitations in what we can do.

Loss-in-weight tablet IBC discharge to drum

Low ceiling height drum discharge

FIBC (supersack) tablet unloader with transverse moving over Thomas Containment Coater inlet.
