Sterling QCG Boiler-based advantages:

- Boilers can be replaced in 30 minutes or less. Less down time means considerably less cost to replace generators/boilers.
- Thick boiler walls that can be descaled weekly if needed. No warranty exclusion for descaling too often.
- Descaling process is simple; with easy access ports. No monitoring needed, and no external pumps required.
- Sterling QCG steamers include an internal water filtration system. No extra cost for system and installation.
- With Sterling Energy Star steamers there's just no compromising of performance for efficiency. They're simply the fastest, highest production steamers available with instant recovery!

Steam generators can easily be removed in a matter of minutes.

About Sterling Manufacturing...

Sterling Manufacturing is owned and operated by Lon Lehman and Chip Tippmann. Lon and Chip both started in the commercial steamer business with Accutemp Products in 1992.

Lon performed Manufacturing/Design Engineering while creating and managing the Service Department, and Chip was the first Outside Sales Representative for Accutemp. Lon finished his tenure with Accutemp as the head of Engineering, and Chip became sole-owner of an outside sales rep company selling Accutemp products exclusively through much of the United States.

In the spring of 2003, Lon and Chip ventured out together and started Intek Manufacturing. Intek manufactured the Xtreme Steam Connectionless Steamer, and in 2004, Intek was presented the Appliance Design of the Year Award. Intek was later acquired by Unified Brands in 2010.

In September of 2014, Lon and Chip formed Sterling Manufacturing. In the course of designing and selling steamers, they discovered that half of the customers won't purchase connectionless/boilerless steamers because they recover too slowly. The other half of the steamer customers won't purchase steam generator/boiler-based steamers because of the expense to maintain and repair the steam generators.

Sterling has designed a fast connectionless steamer that recovers much faster than existing connectionless steamers. We've also designed a steam generator/boiler-based steamer that is very cost-effective to maintain and repair. The Sterling Steamers are the culmination of 32 years of experience in designing, manufacturing, servicing, and marketing Steam Cooking Equipment.

FULL LINE OF BOILERLESS AND CABINET-BASED STEAMERS

Boilerless Steamers

- Fast and Efficient Cooking
- Recover Quickly

Cabinet-based Steamers

- Recover Instantly for High Production
- Steam Generators can be Replaced in Minutes
