

## Used Cooking Oil Rebates: A look at the numbers

Frontline was founded in 2004 when UCO was an unconsidered commodity, trading south of \$0.05. Since then, the UCO rebate story has changed dramatically. The numbers below help illustrate just how much a difference Frontline can make for your bottom line.

Filtered UCO sells for 40¢ per pound.  
Restauranteurs collect

**30¢**  
per pound

in UCO rebates. That's almost  
*five times* what it was worth a decade ago.

At 30¢ per pound, each gallon  
of UCO you sell is worth

**\$2.25**  
per gallon.

In 2004, UCO was hardly thought of, trading for less than  
\$0.05 a pound. On average, rates have increased 1.4¢ every  
year since. That equates to a

**500%**  
increase.

At the current UCO rate, a restaurant would earn

**\$3,375**  
annually.

For a 4,000 square foot restaurant, that would pay  
29% of annual electricity and gas utilities.

With over 35,000 installations globally,  
our customers will earn nearly

**\$120**  
million  
in UCO rebates.

If you signed a contract that prevents you from  
collecting rebates in 2015, you've

lost nearly  
**\$24K**

in UCO rebates. That's a new car every 7 years!

### Would you rather have **zero dollars** or **\$280**?

UCO trades at .30 per pound. Restaurants selling used oil keep the lion's share. An average QSR sells an average of 125 gallons per month, resulting in a monthly rebate of \$280+. Frontline can help your UCO add to your bottom line. So, what sounds better to you: \$280 or zero dollars?

**Are you stuck in a contract that stops you from owning oil and earning rebates?**
